

webistem project space

Facilitate the coordination of your Research & Development projects

Presentation

Webistem Project Space is a secure on-line solution to organise and coordinate a team of researchers from diverse fields in order to facilitate their collaborative research on a project. The functions offered by Project Space help researchers make the best use of internet technology to assist with the non-scientific tasks required of them (management, reporting, project promotion, etc.).

Use Webistem Project Space free of charge during the preparation of your project. Install your preparatory work documents, initialise the shared agenda, assemble gradually your consortium, and create your dossier to respond to a call for proposals. Be ready to begin the moment financing is available and save precious time as the project unfolds.

Functions

Collaborative library

Shared agenda

Secure access by Project/sub-Project

Member directory

Automatic reminders as deadlines approach

Dissemination lists

Management of resources and budget follow-up

Production of final reports

Promotion of results

Webistem conceives and publishes on-line solutions for communities and businesses. We currently propose four software solutions as well as the development of individual services.
